

Anuj Biswas

AI and Machine Learning Enthusiast

📞 9717523630 ✉ anujbiswas303@gmail.com 🔗 LinkedIn 🐙 GitHub 📍 New Delhi, India

PROFESSIONAL SUMMARY

AI and Machine Learning enthusiast focused on building practical AI applications rather than only theoretical models. Experienced in integrating open-source language models, building ML-powered APIs, and developing intelligent systems using Python-based frameworks. Strong interest in LLM applications, backend systems, and AI product development.

EDUCATIONS

NETAJI SUBHAS INSTITUTE OF TECHNOLOGY | Dwarka

Aug 2024 - Sep 2028

Btech

COMPUTER SCIENCE AND ARTIFICIAL INTELLIGENCE

PROJECTS

Multimodal Fake News Detection (Text + Image) | 📄 GIT_LINK 🐙 Github

Dec 2025 - Present

Individual project

- Developed a **multimodal deep learning system** to classify news as Real or Fake by analyzing both textual content and associated images.
- Designed a **late-fusion architecture** combining LSTM-based text embeddings with CNN-based image features for improved prediction robustness.
- Trained separate **text and image models** and integrated them through fusion layers for final binary classification.

Technologies / Tools Used : Python, TensorFlow, Keras, CNN, LSTM, NLP preprocessing, Streamlit

AI Resume Analyzer | 🐙 Github

Mar 2026 - Present

Backend ai model integrator by hugging face.

- Implemented **NLP-based resume parsing and skill extraction** to analyze keywords, experience, and domain relevance.
- Integrated machine learning models from Hugging Face for semantic understanding of resume content and job descriptions.
- Built backend APIs using FastAPI to process resumes and deliver real-time analysis results.

Technologies / Tools Used : Python, NLP, Machine Learning, FastAPI

Github_analyser | 🌐 Website

Mar 2026 - Apr 2026

Backend developer , llm integration,

- Built a GitHub Analyzer that ingests repository URLs, parses codebases, and generates structured summaries for faster understanding of projects.
- Implemented a Retrieval-Augmented Generation (RAG) chat system to enable context-aware Q&A over repository content.
- Used **ChromaDB** for efficient vector storage and semantic retrieval of code embeddings.
- Leveraged open-source **Hugging Face** models (e.g., BAAI) to generate embeddings and enable scalable, cost-efficient search without paid APIs.

Technologies / Tools Used : LLM, RAG, Hugging face , API integration

SKILLS

Databases : MySQL, Supabase, Firebase

Frameworks & Libraries : TensorFlow, Keras, FastAPI, streamlit, scikit learn, pandas, numpy

Languages : English, Hindi

Programming Languages : Python, JavaScript, C++

Soft Skills : Communication, Problem Solving, Critical Thinking

Tools & Platforms : Git, VS Code, GitHub, Docker

ADDITIONAL KNOWLEDGE

Understanding of LLM pipelines, prompt engineering, model APIs, and building AI-powered applications using modern Python frameworks.

AWARDS & ACHIEVEMENTS

- Solved 300+ DSA problems on [LeetCode](#) covering graphs, DP, trees, heaps, and sliding window techniques.
- Built strong problem-solving and debugging skills through consistent competitive programming practice.
- Developed and deployed AI-based applications using RAG, vector databases, and Gemini API integration.
- Created a GitHub documentation analyzer capable of semantic search and contextual query answering.
- Worked with full-stack deployment tools and cloud platforms like [Render](#) for hosting AI projects.

CORE INTERESTS

Artificial Intelligence, Large Language Models, Machine Learning Systems, AI Backend Development, Model Integration and Deployment.
